

# Boating and Water Safety – FISHING

## BOATING EDUCATION REQUIREMENT

---

Anglers using boats must obey boating laws. In West Virginia, anyone born after December 31, 1986 must successfully complete a N.A.S.B.L.A.-approved Boating Education Course before operating a motorboat.

Contact a Natural Resources Police Officer for an available course near you. You can also take the online Boating Education Course available at [www.wvdnr.gov](http://www.wvdnr.gov). Click on boating under the Law Enforcement heading.

## SAFE BOATING RULES

---

Boating accidents usually result from a collision with another boat or an object in the water such as rocks or pilings. A little boating knowledge, common sense and courtesy could prevent most accidents.

- Don't operate a boat under the influence of alcohol or drugs.
- Don't overload the boat.
- Don't sit on the edge of the boat.
- If you must stand up, do so carefully away from the sides.
- Drive at a safe speed.
- Use navigation lights at night.
- Keep a lookout for other boats and follow the rules of navigation.
- Always let someone know where you are going and when you plan to return.
- Don't fish during a thunderstorm.

Check the weather conditions before you leave. Lightning, strong wind and high waves create hazardous conditions. If caught on a lake in a strong storm, put all fishing gear in the bottom of the boat, stay low in the boat and get off the water as soon as possible. In high waves, the best way to keep from capsizing is to steer the boat at a slight angle into the waves.

## Alcohol and Drugs

---

Operating a boat under the influence of alcohol or drugs creates the same risks and carries the same penalties as DUI. Intoxication affects your balance, which is already challenged by being in a boat. It also affects your coordination, vision and thinking ability. Alcohol also causes you to lose body heat faster should you fall into the water, increasing the risk of hypothermia.

## Commercial River Traffic

---

While boating on the major rivers of West Virginia, always be alert for large commercial vessels. Large vessels always have the right-of-way because of long stopping distances and blind spots around them. Also, turbulent water around the large vessel could capsize a small boat easily.

Stay out of danger zones and restricted areas around locks and dams.

## PERSONAL FLOTATION DEVICES (PFDs)

---

Most boating fatalities are the result of a boat capsizing or passenger falling overboard. Nearly 80 percent of those who died in boating accidents were NOT wearing a PFD.

If you are fishing from a boat, West Virginia law requires that you have one PFD on board and readily available for each person on the boat. Any child under 12 years of age must wear a PFD while the boat is in progress. Make sure the PFD is in good condition (try it out in the water from time to time), readily available and fits properly. Boats over 16 feet must also have a ring or cushion on board that can be thrown to a person in the water.

## WADING

---

There are several rules you should follow for safe wading.

1. Wade with a fishing buddy.
2. Wear your PFD.
3. Find out whether the bottom is rocky or muddy.
4. Shuffle your feet or probe with a stick along the bottom to avoid holes.
5. Study how swiftly the water is moving.
6. Wear appropriate foot wear (considering water temperature and bottom substrate).

## PERSON IN WATER

---

Reach-Throw-Row-Go is a method of rescuing a person who is in trouble in water. If the person is close to you, REACH out with a long object such as an oar or tree limb to pull the person into shore or the boat.

If you can't reach the person, then THROW them a life-saving device. If possible, it should be tied to the end of a line so you can pull the person to you. An inflatable ball or foam cooler can be used if the proper device is not available.

If there is nothing to throw, ROW a boat to the person in trouble. The person should be pulled in over the stern, or back, of the boat if possible to prevent the boat from tipping over. If the boat has a motor, it must be shut off before you get to the person in the water.

GO (swim) to the person ONLY as a last resort and only if you have had life-saving training. People who are drowning often panic and injure or drown someone trying to rescue them.
