## A Field Checklist

# Fishes of West Virginia

West Virginia is blessed with a variety of fish resources, including 184 species and 3 hybrid sport fishes distributed among 24 different families. Interestingly, approximately 20 percent are sport fishes, 80% are nongame fishes and 75% are found in just five families: carps/minnows (63 species), perches (32), suckers (19), basses/sunfishes (14), and catfishes (12).

The list of fishes that follows is a compilation of the presently known species in West Virginia and where they are generally found. The drainage abbreviations are for the greater Ohio River basin (O), which includes the Monongahela, Little Kanawha, Kanawha, Guyandotte, and Big Sandy rivers; New River (N), & all waters in the state above Kanawha Falls,

including the Gauley River; Potomac River (P); and James River (J). The drainage indicated for each species does not necessarily mean that it is found in all minor or major tributaries. Different habitat preferences, such as warm or cold water, fast or slow moving streams, or sand or rock bottoms, will dictate where the fishes will be located.

This extensive checklist illustrates the abundance and diversity of West Virginia's fishes. The WVDNR is committed to preserving and maintaining their existence for future generations.

\*Rare (uncommon, undetermined status or limited WV range)

\*\*Extirpated (native to WV, but no recent records)
